Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at http://about.jstor.org/participate-jstor/individuals/early-journal-content.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PREVALENCE OF DISEASE.

No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.

UNITED STATES.

CURRENT STATE SUMMARIES.

California Report for the Week Ended September 29, 1917.

The California State Board of Health reported concerning the status of preventable diseases in California for the week ended September 29, 1917, as follows: Two cases of anthrax in man were notified, one in San Joaquin County and one in Solano County. Anthrax continues prevalent in animals. Two cases of poliomyelitis were notified in San Diego. Thirty-three cases of diphtheria were reported, scattered throughout the State. Typhoid fever continued prevalent, 35 cases having been reported, with minor outbreaks in Calaveras County and Eldorado. Eighty-five cases of scarlet fever were reported, most of the cases of this disease being in small cities. Five cases of smallpox were reported in Nevada County.

The details of notifiable disease cases reported during the week ended September 22, 1917, are as follows:

Anthrax	1	Pneumonia	55
Chicken pox	43	Ophthalmia neonatorum	1
Diphtheria	26	Scarlet fever	48
Dysentery	2	Smallpox	15
Erysipelas	3	Syphilis	26
German measles	29	Tetanus	2
Gonococcus infection	29	Trachoma	1
Malaria	12	Tuberculosis	148
Measles	45	Typhoid fever	42
Mumps	77	Whooping cough	47
